EDUCATION

National Institute of Technology, Rourkela

Rourkela, Odisha

Bachelor of Technology in Civil Engineering

2025 – Present

- Self-directed software engineering track alongside coursework – full-stack development, DS&A, and system design

EXPERIENCE

Chief Technology Officer

Dec 2025 – Present

HoardSpace Bookings Pvt. Ltd.

Remote

- Owned all technical decisions as sole engineering lead for a full-stack booking marketplace, architecting the system from the ground up across frontend, backend, and infrastructure
- Designed and shipped RESTful APIs and a scalable backend architecture supporting 25+ vendors (2.5K+ hoardings) for core booking and payment workflows
- Built and deployed production features end-to-end – authentication, booking engine, admin dashboard – reducing manual operations overhead by an estimated 30%
- Established CI/CD and engineering workflows, cutting deployment time by roughly 40% and improving release reliability
- Partnered directly with founders to translate business requirements into a technical roadmap for the platform

PROJECTS

HoardSpace | *React, Node.js, Express, MongoDB*

2025 – Present

- Engineered a production marketplace connecting hosts and guests end-to-end, handling authentication, bookings, and payments across a full-stack architecture serving 25+ vendors
- Built a role-based admin dashboard for inventory and booking management, cutting manual coordination time by an estimated 30%; integrated Cloudinary for scalable media delivery
- Designed a normalized MongoDB schema supporting 2.5K+ hoarding listings with fast search and filtering

FormAS | *Node.js, Express, Upstash Redis*

2025 – Present

- Built a backend-as-a-service platform letting developers collect form submissions via API with zero backend code, authenticated via secure API keys
- Implemented Redis-based rate limiting and spam protection; shipped webhooks, email notifications, and JSON/CSV export

Elimics | *React, Node.js, MongoDB*

2025 – Present

- Built a production URL-shortening platform with password protection, link expiry, and click-limit controls for secure sharing
- Engineered a real-time analytics engine tracking clicks, visitor geography, and device data, with redirect latency under 100ms

Pulse UI / Pulse Toast | *React, TypeScript, npm*

2025 – Present

- Built and published an open-source, TypeScript-first React component library focused on developer experience; distributed via npm with 2K+ downloads and adopted in 2K+ external projects

ACHIEVEMENTS

- Winner**, Google TechSprint Hackathon 2026 – built EchoCare, which records doctor-patient conversations and converts them into structured, HIPAA-compliant SOAP notes ready to review and export
- 2nd Runner-up**, IIT Bhubaneswar Pravaah Web Hackathon 2026 – built [cosmic-watch-mocha.vercel.app](#) to track asteroid risk using NASA APIs

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, HTML, CSS

Frontend: React, Next.js, Tailwind CSS, ShadCN UI, Vite, Aceternity UI

Backend: Node.js, Express.js, REST APIs, Socket.io, WebRTC

Data & Infra: MongoDB, SQL, Upstash Redis, Cloudinary, Vercel, Render

Auth & Tools: JWT, OAuth, Firebase Auth, Git, GitHub, Postman
